

## **Algacide 542**

### **Product Type**

Algacide is water based composition, it is used by adding it to any emulsion products or water for application to a substrate in order to remove and inhibit the growth of microbes. It is effective against a wide range of fungus, algae and yeast. This beige grayish viscous liquid dispersible in water to insure solubility in the emulsion products.

### **Application**

Algacide is an excellent dry film preservative for the following:

- Dispersion Emulsion Paint
- Polymer Dispersion
- Glues
- Adhesive and Sealants

The optimum dose of as preservative should be between 0.8 to %2 depending on the application.

---

## **Usage Instruction**

### **Surface**

The concrete should be treated . It has to be clean and free of dust. Add one bottle algacide 542 (100)cc) to a one US gallon of emulsion paint after mixing - apply as traditional emulsion paint. Normally one to two coats are satisfactory.

### **Packaging**

Plaster Algacide 542 is supplied in 100cc plastic bottle.
